

Delivery service product

Delivery service products are products, which can be used to ship items from A to B. They can be used for [shipment path](#) definition in the [shipment path administration app](#).

Typical services

- **Courier Services** - These providers specialize in the quick and efficient delivery of small packages and documents. They often offer same-day or next-day delivery options.
- **Freight and Cargo Services** - These companies handle larger shipments and may offer options for shipping by air, sea, or land. They may specialize in domestic or international shipping.
- **Food Delivery Services** - These are companies that specialize in delivering prepared food from restaurants or grocery items from stores to consumers' homes. Examples include services like Uber Eats, DoorDash, and Instacart.
- **E-commerce and Package Delivery** - Companies like UPS, FedEx, and DHL provide shipping services for online retailers and other businesses, ensuring the safe and timely delivery of products to customers.
- **Last-Mile Delivery** - This refers to the final stage of the delivery process, getting packages from a local distribution center or hub to the customer's doorstep. Companies like Amazon often handle their own last-mile deliveries.
- **Specialized Services** - Some delivery providers focus on specific industries, such as medical supplies, legal documents, or perishable goods. They have specialized knowledge and equipment to handle these specific types of deliveries.
- **On-Demand Services** - Companies like Postmates, Grubhub, and TaskRabbit provide on-demand delivery services, enabling customers to request various deliveries or services with the convenience of a mobile app.
