

General permission concept

Persons and user accounts

For most digitals each staff member has its own system user account. How staff members receive the user accounts is implemented through the [B-Op HR Hub](#) components.

Each user account can have *group memberships* and *personal permissions*.

User groups

Through group memberships, the user accounts which are member can inherit *group permissions* which are defined on user group level.

Groups may have two options of the sub-group memberships:

- Plus-Groups - members of this group are added to the parent group
- Minus-Groups - members of the group are removed from all the plus groups, but not from the parent group.
- Super Minus-Groups - they act like minus groups, but can also remove users which are added to the parent group manually
