

# Product selection

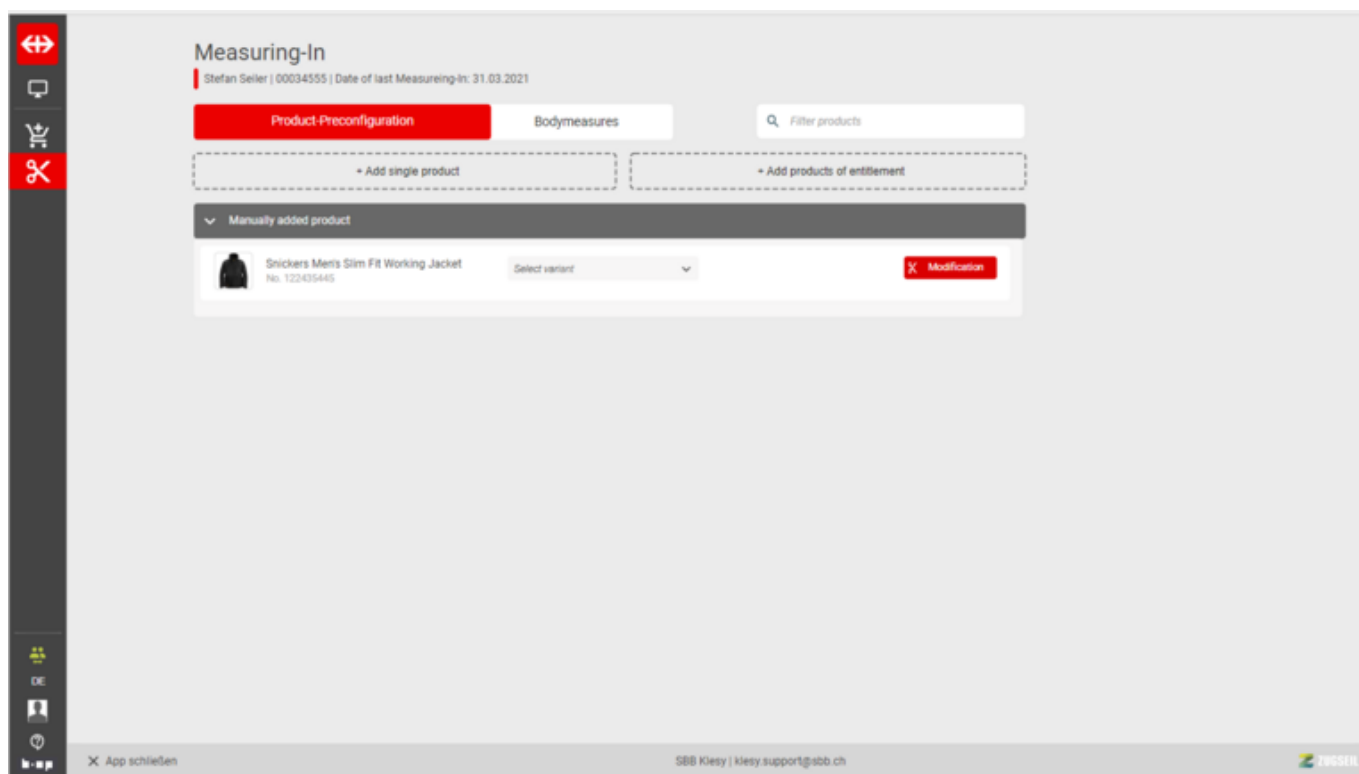

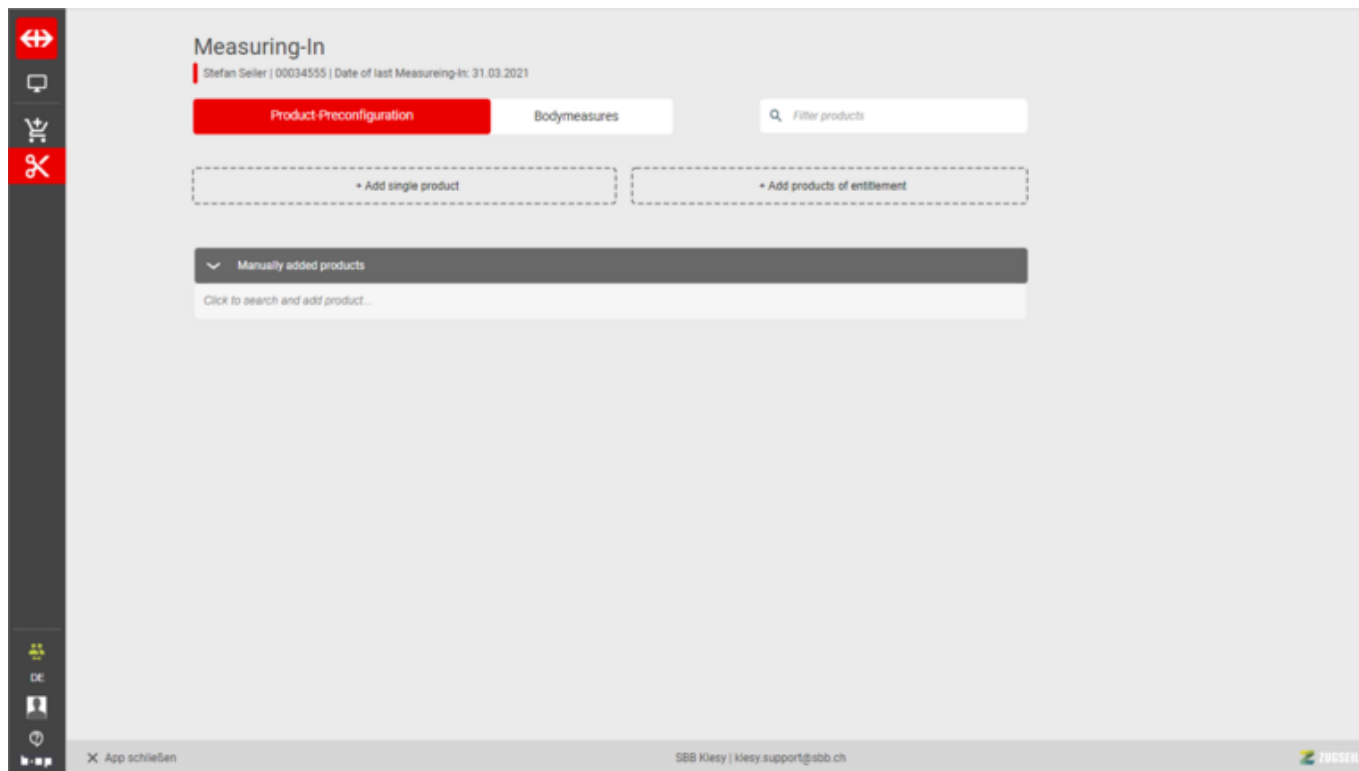

**Case 1: For certain employee measurements and modifications are held for the first time:**

When employee enters for the first time, he needs to enter products which he wants to modify.

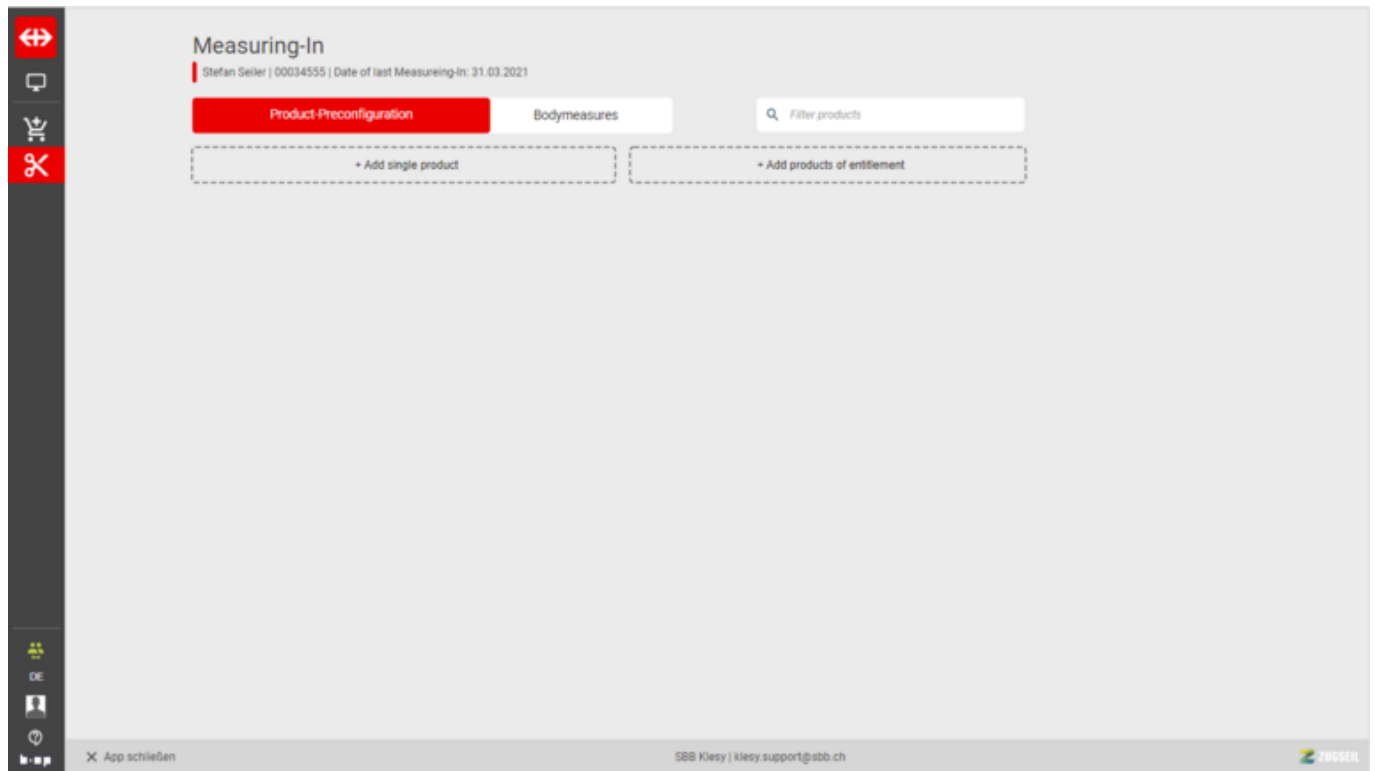

## **Add single product**

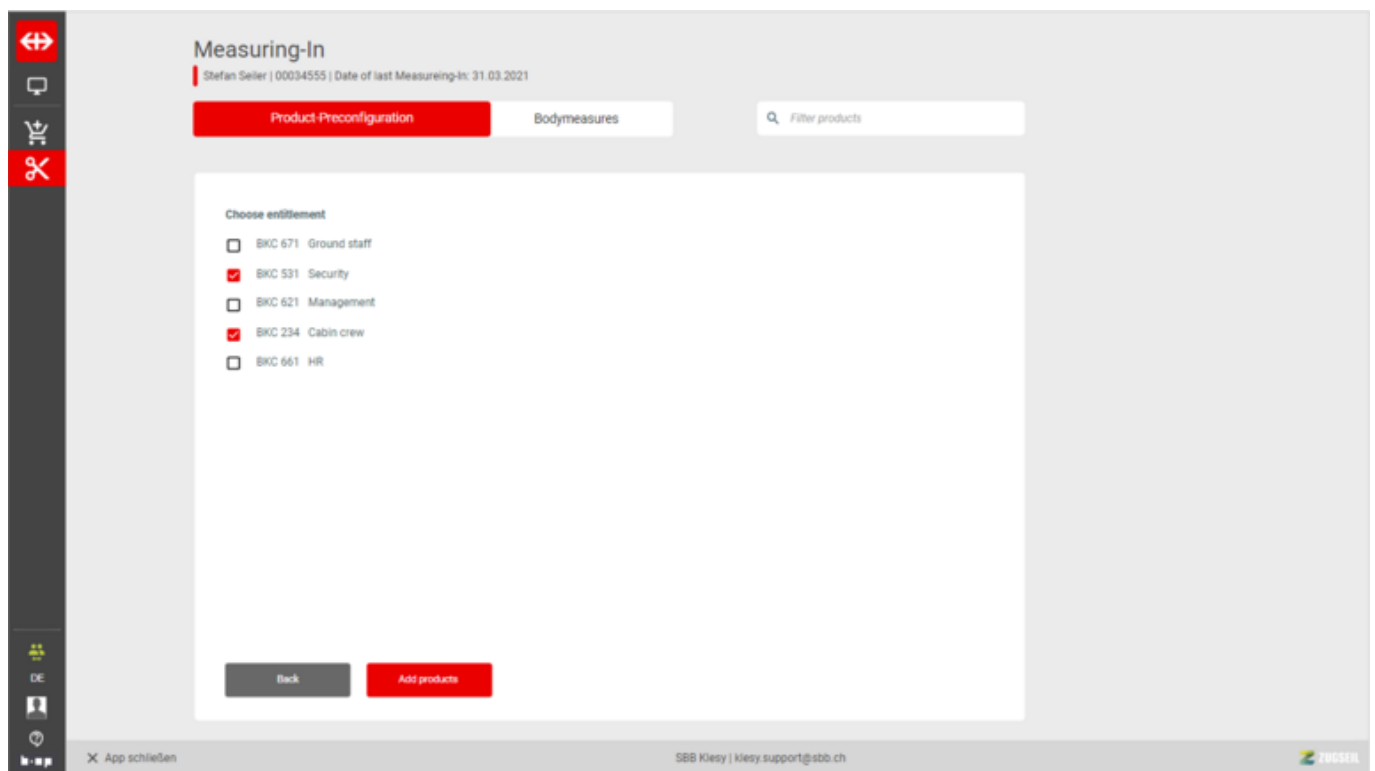

Clicking on the button "Add single product" displays product group-Manually added products, and text box below it where by entering the product name or product number as a search criteria, and pressing enter new product is added to be group. Available products are those which are transferred over catalogue to the chosen customer.

***Add product of the entitlement***

Choose entitlements which products you want to add:

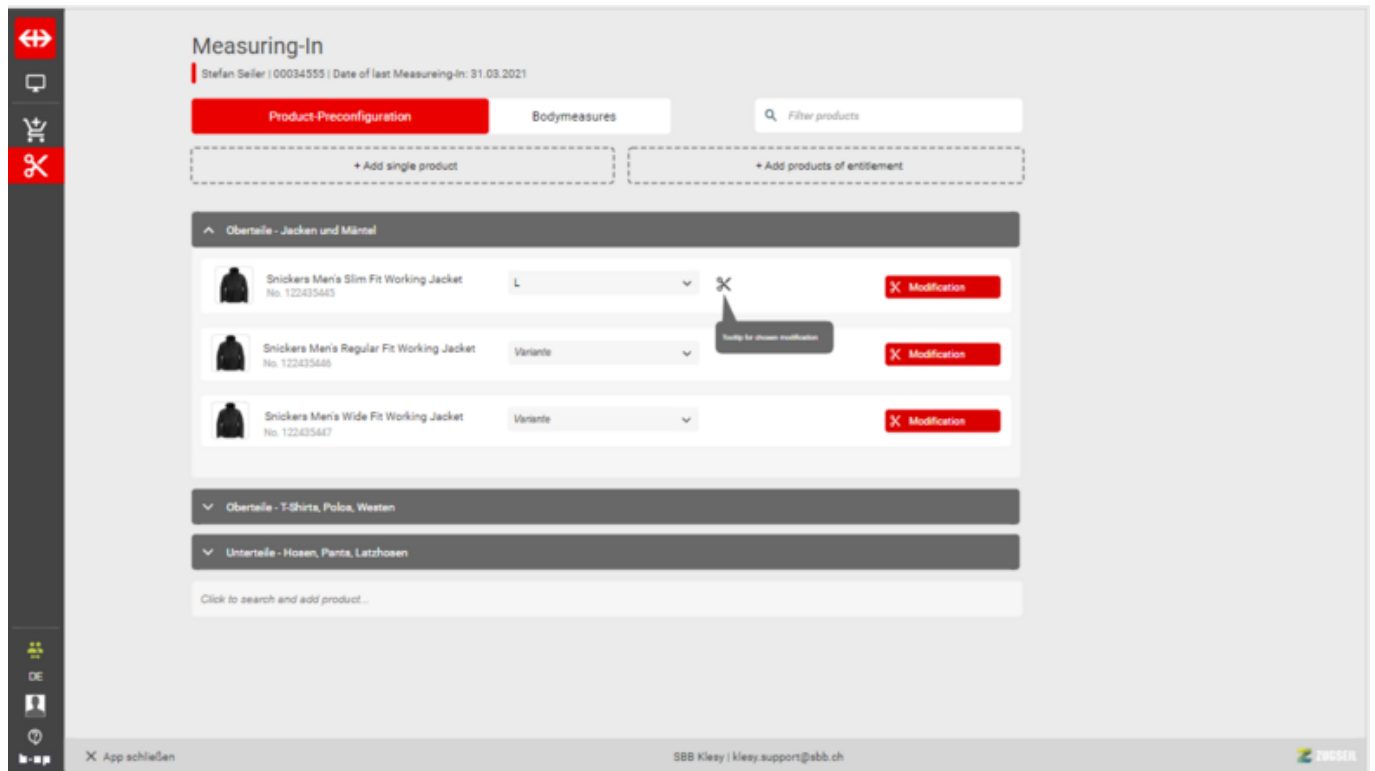

Q: Entitlement dropdown?

Added products from the entitlement:

Products are shown systematically within groups, if grouping does not exist, then all products are added into the "Manually added" group.

Groups are like a container for products. Each product contains its image, name and number, variant selection dropdown, if product is preconfigured, scissors icon with tooltip with added modification is displayed and modification button.

## Contents

- [1 Header\[edit | edit source\]](#)
- [2 Full text filter\[edit | edit source\]](#)
- [3 Activity dropdown\[edit | edit source\]](#)
- [4 Second dropdown\[edit | edit source\]](#)
- [5 Groups](#)
- [6 Add product](#)

### Header[edit | edit source]

Measuring-in is the main title and some information just below it:

Selected employee name | employee number | last measure !!!

### Full text filter[edit | edit source]

Full text filter is a simple search box where the user enters their search term and gets results which (partially) match the query. If the filter query matches the content of a group name, the user expects to see all items in that group. If the filter query matches only some of the items in the group, but not the group itself, searched items in the group are highlighted. Parameters which are considered for matching are: group name, product name, product number.

### **Activity dropdown[edit | edit source]**

Dropdown where user is choosing activity, if user has more then one. If user has only one activity it is preselected.

### **Second dropdown[edit | edit source]**

Dropdowns offers:

-Configurable products

-All products

### **Groups**

Each group acts as a container for the products within it. It can be expended and collapsed by clicking on the header (a suitable icon is displayed for expanded and collapsed state). All groups are expanded by default, user can collapse them.

- Group header is group name

Positions within group contain:

Product image

Product name with product number

Product variants dropdown (variant should be selected to activate customization button)

### **Add product**

All manually added products will be in the group "Manually added"
